About me

I am a student in the Faculty of Science and Communication Technology with a strong interest in website development and a growing curiosity in the field of Artificial Intelligence. I am seeking opportunities to gain hands-on experience and further enhance my technical and professional skills.

Project Experience

Parking Me (Parking Finder Website)

- Developed and designed the front-end interface of a web application that helps users find available parking spaces.
- Focused on creating a user-friendly layout and applying UI/UX design principles to enhance usability and visual appeal.

Pet Find Home (Pet Adoption Platform)

- Contributed to the front-end development of a web platform that connects pet owners who can no longer keep their pets with individuals seeking adoption.
- Designed and implemented responsive web pages with modern styling to ensure an engaging and accessible user experience.

Supercar Booking Application

- Developed a mobile application for supercar booking using Kotlin.
- Built and optimized intuitive UI components for a smooth booking flow.
- Applied object-oriented programming principles to improve scalability and maintainability.
- Integrated booking features including car selection, reservation management, and user interaction flow.
