PROFILE

Passionate about Automation, AI Agents, and RPA + AI, with a strong focus on leveraging intelligent technologies to enhance work efficiency, reduce repetitive tasks, and develop autonomous systems capable of learning and decision-making. Possesses a foundational understanding of Large Language Models (LLMs), Agent Architectures, and Prompt Engineering, with a keen interest in exploring innovative approaches to AI Workflow Automation that empower digital transformation in modern organizations.

PROJECTS EXPERIENCE

Junior Technical Engineer / Infrastructure Engineer (iCONEXT Co., Ltd)

- Monitored and maintained server health and performance, including VPN connectivity, backup systems, and server error troubleshooting.
- Provided technical support to end-users, including notebook setup, hardware maintenance, data backup, and remote assistance.
- Managed user accounts and permissions via DirectAdmin and Active Directory (AD).
- Performed VM restoration and supported virtualization environments to ensure business continuity.

Parking Me (Find Parking website), Back-end Developer

- Developed the Back-end system to interact with MySQL databases for user and parking information.
- Implemented core features including searching for parking spaces, BookingHistory, UserProfiles, PostingAvailableSpaces and Reservation Management.

Mission Marathon 007 (App About Runners), Front-end Developer

- Built the front-end interface using Android Studio and Kotlin for mobile app development.
- Developed features allowing users to register for marathons, browse suitable running shoes, and calculate running pace.

Pet Find Home (Animal Adoption website), Back-end Developer

- Developed the back-end system using PHP and SQL for database integration and data management.
- Utilized XAMPP as a local server environment to simulate the system.
- Managed MySQL databases for user and pet information on the platform.
